### Product Description

## Transform Your Property with a Stunning Storage Solution That Combines Classic Beauty with Modern Function

When you need serious storage space but refuse to compromise on curb appeal, the **Carriage House Garage** delivers the perfect blend of *timeless elegance and practical utility*. This isn't just another storage shed tucked away in your backyard. This is a premium outbuilding that actually enhances your property value while providing the versatile space you need for vehicles, equipment, tools, and workshop projects.

### Classic Design That Complements Any Property

The **steep 6/12 roof pitch** creates that distinctive carriage house silhouette that homeowners love, giving your property an upscale, estate-like appearance. This architectural detail isn't just about looks, either. The steep pitch provides **exceptional water runoff**, protecting your stored items from moisture while creating valuable overhead storage space in the loft area. Built with **durable 50-year LP SmartSide siding**, this garage shed stands up to decades of weather exposure while maintaining its attractive appearance. LP SmartSide is engineered wood that resists moisture, impact, and insect damage far better than traditional wood siding, giving you maintenance-free beauty for years to come.

### Dual Access Options for Maximum Versatility

What sets this carriage house apart is its **intelligent dual-door design**. The full-size garage door opening accommodates vehicles, riding mowers, ATVs, or large equipment with ease. But here's where it gets even better: the separate **36-inch single carriage house door with keyed lock** gives you *secure pedestrian access without opening the entire garage*. This thoughtful design feature means you can:

- **Access stored tools and supplies** without exposing your entire garage contents
- **Use the space as a workshop** while keeping vehicles secure inside
- **Maintain better climate control** for temperature-sensitive storage
- **Enhance security** with separate locking mechanisms

### Natural Light for Comfortable Work and Storage

Multiple strategically placed windows flood the interior with natural light, making this space comfortable for both storage and active work. The **4-inch x 21-inch front gable window** is perfectly positioned to illuminate your workspace while adding authentic carriage house character to the exterior design. Additional windows throughout ensure you can see what you're looking for without constantly switching on artificial lighting.

### Built for Your Specific Needs

Understanding that every property and climate is different, this carriage house comes with **customizable roofing options**. Choose from *traditional architectural shingles* for a classic residential look, or upgrade to a **metal roof system** for enhanced durability, energy efficiency, and modern appeal. Metal roofing also provides superior protection against severe weather while requiring virtually no maintenance over its extended lifespan.

### Quality Construction Throughout

This isn't a flimsy prefab structure that will wobble in the first strong wind. The Carriage House Garage features:

- **Heavy-duty framing** engineered to handle snow loads and wind stress
